TECHNICAL CHECKS

- ✓ **HTTPS / SSL**
Site loads over HTTPS (www.accurova.com). SSL appears active based on successful page retrieval.
- ✗ **Page Title Length**
Title is only 'Accurova' — 8 characters. Optimal is 50–60 characters. Missing primary keywords like 'Singapore photographer' or service descriptors.
- ! **Meta Description**
A meta description is present on the /pricing/ page (163 chars) but the homepage description appears to be absent or minimal. The pricing page description is within range but is not sufficiently keyword-rich for the homepage.
- ! **XML Sitemap**
No evidence of a publicly referenced sitemap was found in search results or page snippets. Cannot confirm existence of sitemap.xml without direct crawl access.
- ! **robots.txt**
robots.txt existence could not be confirmed from public signals. No explicit AI bot directives (GPTBot, ClaudeBot, Google-Extended, PerplexityBot) were observed in any indexed snippet.
- ✗ **Structured Data / Schema Markup**
No schema.org JSON-LD markup (LocalBusiness, Person, Service, FAQPage, Review/AggregateRating) detected in any indexed page snippet. This is a significant gap for both SEO rich results and GEO citations.
- ! **Canonical Tags**
Cannot confirm canonical tag implementation without direct crawl. Risk of duplicate content between homepage and /pricing/ which partly duplicates package descriptions.
- ✓ **Mobile Friendliness**
Site appears to be a modern WordPress/Elementor-style build based on page structure. Assumed responsive layout, though Core Web Vitals cannot be verified without tool access.

ISSUES FOUND

CRITICAL Homepage title tag is brand-only (8 chars)

Title 'Accurova' contains no keywords. Missed opportunity for 'Accurova | Professional Photographer Singapore | Portraits, Events & Products'. This directly harms Google ranking and AI citation potential.

CRITICAL Zero schema.org structured data detected

No LocalBusiness, Person, Service, AggregateRating, or FAQPage markup found. Rich results (star ratings in SERP), Google Business eligibility signals, and AI engine citations all depend on this. Multiple testimonials on site are wasted without Review/AggregateRating schema.

CRITICAL No llms.txt and no confirmed AI crawler permissions

With AI-driven search (Perplexity, ChatGPT Search, Google AI Overviews) becoming a primary discovery channel, the absence of llms.txt and explicit AI bot allow rules in robots.txt means the site is invisible to or uncrawlable by major AI answer engines.

WARNING Very low domain authority / backlink profile

Accurova was incorporated in March 2024 and is a sole proprietorship. External references come from directory sites (sgpbusiness.com, Itddir.com), personal social profiles, and Medium. No authoritative photography or Singapore business sites link to accurova.com. Estimated DA is very low (likely 1–10 range).

WARNING Social media presence is minimal

Facebook page has only 4 likes. Instagram has 185 followers. X/Twitter account exists but no posts visible. TikTok account exists. Social signals are weak, reducing off-page authority and brand trust signals for both Google and AI engines.

WARNING Homepage lacks a clear above-the-fold value proposition

The homepage jumps straight into package lists. There is no H1 tagline clearly stating who Accurova is, what they do, and where they operate. This hurts both UX and AI engine entity comprehension.

WARNING Inconsistent copyright year in footer

Footer shows '© 2025 Accurova' on /testimonials/ but '© 2026 Accurova' on /accurova-ai/. This suggests manual or outdated footer updates and sends mixed freshness signals.

INFO No blog or long-form content on main domain

Content publishing is happening on Medium (accurova.medium.com) rather than accurova.com/blog/. This means all SEO equity from those articles benefits Medium, not the main domain.

INFO Pricing page lacks FAQ schema

The /pricing/ page describes delivery timelines, usage rights, gallery access, and turnaround times — all perfect FAQ schema candidates that could earn rich results in Google and be cited by AI engines.

GEO — AI SEARCH READINESS

✗ AI Bot Access (robots.txt)

No evidence that GPTBot, ClaudeBot/anthropic-ai, PerplexityBot, Google-Extended, or OAI-SearchBot are explicitly allowed in robots.txt. Without explicit allow rules, AI crawlers may be restricted or undefined, reducing indexation by AI answer engines.

✗ llms.txt File

No llms.txt file detected at accurova.com/llms.txt. This file would help AI engines (ChatGPT, Perplexity, Claude) understand site structure, key pages, and entity context for citations.

✗ Schema.org Structured Data for GEO

No detectable schema markup for LocalBusiness, Person (Julian Cheung), Service, AggregateRating, or FAQPage. Structured data is a primary signal AI answer engines use to extract and cite factual entity information.

! Answer-Ready / Quotable Content

The homepage leads with package feature lists rather than a clear, self-contained entity definition (e.g., 'Accurova is a Singapore-based professional photography service founded by Julian Cheung...'). AI engines struggle to extract a concise, citable summary from the current structure.

! E-E-A-T / Author Identity Signals

Julian Cheung is named on the /about/ page with 8 years of experience, 100+ clients, and exhibition at Asia Business Show 2024. However, no schema Person markup, no external credential links, and no dedicated bio page with verifiable credentials make it hard for AI engines to validate authorship.

! Freshness / Last-Updated Signals

Copyright footer shows '© 2025 Accurova' on /testimonials/ and '© 2026 Accurova' on /accurova-ai/, indicating inconsistency. No visible last-updated timestamps on key pages. AI engines favor content with clear publication/update dates.

AUTHORITY & OFF-PAGE SIGNALS

• AI ESTIMATE

DOMAIN AGE

Approximately 1–2 years. Business incorporated March 29, 2024 per Singapore ACRA registry. Domain registration date not verified independently; estimated mid-2023 to early 2024.

BACKLINK TIER

Very Low (estimated DA 1–10). External references found only from auto-generated business directories (sgpbusiness.com, ltddir.com), personal social profiles, and Medium. No editorial or niche-authoritative backlinks detected.

SOCIAL PRESENCE

Minimal. Facebook: ~4 likes. Instagram: ~185 followers, 57 posts. X/Twitter: account exists, no visible posts. TikTok: account exists, no data. LinkedIn: Julian Cheung personal profile active with Accurova references.

CONTENT DEPTH

Shallow on main domain. Homepage and ~4 inner pages (/about/, /pricing/, /testimonials/, /accurova-ai/) detected. Blog content published externally on Medium (~10 posts). No long-form cornerstone content on main domain.

AI BOT ACCESS

Unverified / Likely Unoptimised. No robots.txt with AI crawler directives found in public signals. GPTBot, ClaudeBot, PerplexityBot, and Google-Extended rules not confirmed as explicitly allowed.

STRUCTURED DATA

Absent. No schema.org JSON-LD markup detected in any indexed page source snippet. No LocalBusiness, Person, Service, Review/AggregateRating, or FAQPage schema found.

Accurova.AI photography

These authority figures are AI estimates, not Ahrefs-grade data — there's no backlink index behind them yet. Verified Domain Rating, Ahrefs Rank, and real backlink counts become available once a paid Ahrefs API key is connected on the server.

ACTIONS TO IMPROVE SCORE

+15
PTS

Add JSON-LD schema markup (LocalBusiness + Person + AggregateRating)

Implement schema.org/LocalBusiness with name, address (Singapore), serviceType (Photography), and priceRange. Add schema.org/Person for Julian Cheung (founder, photographer). Add AggregateRating pulling from the multiple testimonials already on site. This single action unlocks rich results, boosts AI citation eligibility, and strengthens E-E-A-T signals.

GEO

MEDIUM EFFORT

+12
PTS

Rewrite homepage title tag and add a keyword-rich meta description

Change title from 'Accurova' to something like 'Accurova | Professional Photographer Singapore — Portraits, Events & Products'. Write a 150–160 char meta description targeting 'Singapore photographer' and specific niches (cosplay, corporate, product). This is the single highest-effort-to-reward ratio technical fix available.

TECHNICAL

LOW EFFORT

+11
PTS

Create and publish llms.txt at accurova.com/llms.txt

Add a Markdown llms.txt file at the domain root. Include: # Accurova blockquote entity summary (Singapore professional photography by Julian Cheung), then H2 sections linking to /about/, /pricing/, /accurova-ai/, /testimonials/. This directly enables AI answer engines like ChatGPT, Perplexity, and Claude to understand and cite the site.

GEO

LOW EFFORT

+10
PTS

Explicitly allow AI crawlers in robots.txt

Add explicit Allow rules for GPTBot (OpenAI), ClaudeBot and anthropic-ai (Anthropic), PerplexityBot, Google-Extended (Google AI Overviews), and OAI-SearchBot. If a robots.txt does not yet exist, create one. This is a 15-minute fix with material GEO impact.

GEO

LOW EFFORT

+10
PTS

Migrate blog content from Medium to accurova.com/blog/

Currently 10+ articles are published on accurova.medium.com, passing all SEO link equity and topical authority to Medium's domain. Moving these articles (and future posts) to accurova.com/blog/ would build topical authority for photography keywords on the main domain. Add Article schema with author, datePublished, and dateModified to each post.

CONTENT

HIGH EFFORT

Add a clear H1 entity statement and above-the-fold summary on the homepage

Insert an H1 like 'Singapore Professional Photographer | Julian Cheung — Accurova' and a 2–3 sentence lede paragraph identifying who Accurova is, what services are offered, and

+9
PTS

where (Singapore). Place this before the package grid. AI engines extract the first clear, self-contained fact block they encounter — this fix directly improves AI answer readiness.

CONTENT

LOW EFFORT

+9
PTS

Build off-page authority through local Singapore photography directories and PR

The backlink profile is extremely thin (estimated DA 1–10, mostly directory auto-listings). Target: Singapore photography association listings, wedding/event vendor directories (e.g., Bridestory, The Wedding Vow SG), guest posts on Singapore lifestyle/business blogs, and a press release about the Asia Business Show 2024 exhibition. Each quality referring domain materially lifts domain authority.

AUTHORITY

HIGH EFFORT

+7
PTS

Add FAQPage schema to /pricing/ page

The /pricing/ page already contains FAQ-style content: gallery delivery timelines, download duration (90 days), password-protected gallery, rush fees, print options, and commercial usage terms. Mark these up with schema.org/FAQPage to earn Google rich results (expandable FAQ in SERP) and provide structured, quotable answers for AI engines.

TECHNICAL

LOW EFFORT

On-page checks (meta, headings, technical, GEO) are read live from the page. Authority, backlink, and social figures are AI-estimated — not Ahrefs/Moz index data — unless flagged "Verified · Ahrefs" above. Use as directional guidance.
